PROFESSIONAL SUMMARY

Results driven Quality and Manufacturing Engineer with 10+ years of experience in medical device manufacturing across FDA-regulated environments. Proven expertise in quality systems compliance, managing huge teams on compliance procedures and quality standards, and root cause analysis for medical devices. Hands-on problem solver with track record of driving measurable nonconformance reduction and collaborating cross-functionally to implement effective quality assurance controls.

PROFESSIONAL EXPERIENCE

Manufacturing & Quality Engineer

Sorenson Engineering | Yucaipa, CA | September 2024 – February 2026

- Developed and implemented quality assurance controls, including inspection methods, quality plans, and process specifications aligned with applicable standards.
- Monitored production output and provided support to mitigate delays to ensure that deadlines are met.
- Conducted risk analysis and assed process capabilities to identify compliance risk and drive proactive corrective actions.
- Authored and maintained technical documentation (SOPs, work instructions, compliance reports).
- Coordinated cross-functional compliance activities between Engineering, Production, and Quality departments.
- Researched and interpreted industry standards to ensure manufacturing compliance.

Manufacturing Engineering II

Becton, Dickinson & Company | San Diego, CA | December 2020 – August 2024

- Researched and clarified FDA regulations and Medical Device Directive requirements, providing actionable guidance to technical teams and ensuring alignment with global regulatory standards.
- Monitored regulatory changes and communicated updates to cross-functional stakeholders, maintaining current knowledge of Medical Device Regulations and Quality Management Systems.

- Coordinated Corrective Action item activities across multiple departments (Engineering, Quality, Risk Management, Regulatory, etc.), tracking 15+ concurrent corrective actions using SAP and Excel.
- Authored and investigated deviations across product lines, applying structured root case methodologies to support accurate dispositions and reduce recurrence risk.
- Served as subject matter expert and primary point of contact for nonconformance management, reducing overall nonconformances in less than one year.
- Proactively identified compliance risks before escalation through internal audits, trend analysis of past incidents, and implementation of Key Risk Indicators (KRIs) and risk mapping tools.
- Prepared documentation for regulatory audits and interfaced with external regulatory bodies, ensuring compliance with FDA and international standards.
- Developed and maintained compliance documentation including SOPs, work instructions, and engineering specifications accessible to non-technical users.
- Created and maintained databases in SAP to track process changes, equipment qualifications, and compliance records.
- Led process improvement initiatives using Lean Manufacturing principles, enhancing quality, reliability, and compliance efficiency.
- Conducted root cause analysis for corrective actions and nonconforming reports, documenting findings and recommendations for review.

Manufacturing Engineering I

Becton, Dickinson & Company | San Diego, CA | March 2019 – November 2021

- Supported regulatory compliance activities by maintaining accurate records of production activities and test results in accordance with cGMP (Good Documentation Practices) and QMS requirements.
- Conducted investigations and root cause analysis for nonconforming materials, preparing clear reports for Quality and Engineering stakeholders.
- Collaborated with Engineering, Product Focus Teams, and Operations Engineering groups to implement process improvements.
- Developed training materials and supervised new associates on compliance procedures and quality standards.

Production Assembler

Carefusion | San Diego, CA | February 2015 – March 2019

- Interpreted schematic drawings, diagrams, blueprints, and specifications to determine assembly requirements and materials needs.
- Maintained detailed records of assembly activities in compliance with quality management system requirements.
- Consistently met and exceeded manufacturing build goals while maintaining compliance with safety and quality regulations.

EDUCATION

Bachelor of Science in Electronics Systems Engineering Technology

Concentration in Mechatronics | ECPI University, Virginia Beach | February 2024

Bachelor of Arts in Applied Arts and Sciences

Concentration in Multimedia | San Diego State University | December 2012

CERTIFICATIONS

- AIGPE's Lean Six Sigma White and Yellow Belt
- Root Cause Analysis (Coursera)
- Quality Improvement and Management (Board Infinity)
- Microsoft Power BI (San Bernardino Community College District)
